

COVID-19 PREMISES RISK ASSESSMENT TOOL

v1.1/hs/Apr20

BACKGROUND

The current COVID-19 'coronavirus' outbreak poses a serious risk to individuals and businesses. This risk assessment tool helps identify the control measures to consider to minimise the risk of workplace infections. It is part of a suite of documentation that is produced by Sitemark to support organisations in the delivery of 'Best in Class' facilities management services.

What is COVID-19 and how is it spread?

A coronavirus is a type of virus which, as a group, is common across the world. Typical symptoms of coronavirus include fever and a cough that may progress to a severe pneumonia causing shortness of breath and breathing difficulties. COVID-19 is a new strain of coronavirus first identified in China. Generally, coronavirus can cause more severe symptoms in people with weakened immune systems, older people, and those with long-term conditions like diabetes, cancer and chronic lung disease. The symptoms of coronavirus can include a cough, a high temperature and shortness of breath. However, displaying these symptoms does not necessarily mean someone has COVID-19 as they are similar to other illnesses that are much more common, such as cold and flu. Because it's a new illness, it is not known exactly how it spreads from person to person although similar viruses are spread through droplets caused by coughs and sneezes. Currently, there is no vaccine to protect against the spread of COVID-19.

The role of Premises Managers

Premises Managers play a crucial role in keeping building users safe in the built environment and supporting organisations to function at maximum efficiency. These are unprecedented times and the potential scale and duration of disruption is currently unknown. Consequently, it is imperative that Premises Managers are able to highlight and implement the robust controls needed to protect the health of building users and to minimise the financial impact of a COVID-19 outbreak.

T: 020 7237 2007 E: covid19@wettons.co.uk W: www.wettons.co.uk

POST LOCKDOWN PLANNING

The information contained in this document is based on sources that we believe are reliable and should be understood as general risk management and information only. It is not intended to be taken as advice with respect to any specific or individual situation and cannot be relied upon as such. You must contact your premises H&S manager to confirm the measure to be implemented at your premises but Wetton is here to support your needs.

Initial Plan

There are a range of issues and tasks you will need to consider as part of the process of opening up your business. Every step should be carefully considered and fully documented. A Risk Assessment should be completed.

Plan how you are intending to operate in the short, medium and longer term

What are the key operations needed in the initial opening and then operating phase?

As part of these plans you should consider a phased return. Limiting the number of employees on site will help with implementing the below;

Can employees work a shift system or staggered working?

As far as possible, where staff are split into teams, fixing these splits (cohorting), so that where contact is unavoidable, this happens between the same individuals

How will you manage social distancing?

How will cleaning – initial and ongoing – be managed?

How will you manage general and respiratory hygiene in the workplace?

Tasks and Measures

If a shared or landlord controlled premises you will need to ensure you consult, coordinate and cooperate with the landlord or other occupiers. Multi-tenure operations will need to carefully consider access (e.g. social distancing on stairs or in lifts) and may only be able to open on a limited scale so that this can be controlled.

- To ensure that all plant and machinery is in correct working order, has been inspected, tested and maintained and that any statutory inspections (of lifts, LEV, Pressure Systems, etc) have been completed.
- Speak to your suppliers, including materials, maintenance, inspection, cleaning, etc. to ensure the services are available before the opening to ascertain what their position is.
- Deep cleans of all areas and facilities should be considered.
- Following the initial deep clean, a regular cleaning regime will need to be developed. Cleaning desks, work stations and surfaces before and after work should be a minimum and this may need to be extended to include cleaning throughout the working day, between shifts and the like.
- · In areas such as kitchens, staff canteens, etc. special considerations may be needed in terms of hygiene and cleaning
- Ensure that waste management has been reviewed. Measures for managing potentially contaminated waste will need to be considered.
- Ensure that tests (such as legionella testing) have been completed and that investigations have been completed for the presence of pests (rats for example).
- Ensure that the service providers have been given notice of any changes to procedures put in place during the lockdown phase
- Make sure at all times that you are complying with any insurance warranties or conditions
- · Review your site and facilities layout, this may need to change due to social distancing rules
- Review your risk assessments to ensure they reflect the new way of operating, this should include your Fire Risk Assessment, General Assessments, Manual Handling, DSE, PPE, RIDDOR etc.
- Revise emergency planning procedures fire, etc. to ensure there is appropriate cover in line with your assessments
- Business travel and site visit policies and procedures should be reviewed.
- Consider measures needed in case of a re-occurrence of the virus amongst staff and preparations made for the closure and deep clean of the premises in this instance. This plan should include:
 - > Identification of a room or area where someone who is feeling unwell or has symptoms can be safely isolated
 - > Have a plan for how they can be safely transferred from there to a health facility/home
 - Agree the plan in advance with your partner health care provider or health department where possible.
- Signage may need to be considered such as floor markings to facilitate compliance with the 2m rule. This includes entry
 points to buildings, toilets and communal break areas where queues may form.
- Consider the need for health declarations and the like, or taking the temperature of employees when returning to work
- · Keep promoting the message that people need to stay at home even if they have only mild symptoms of COVID-1
- Display posters with this message in your workplaces. Combine this with other communication channels commonly used in your organisation or business

INSTRUCTIONS FOR COMPLETING THE ASSESSMENT

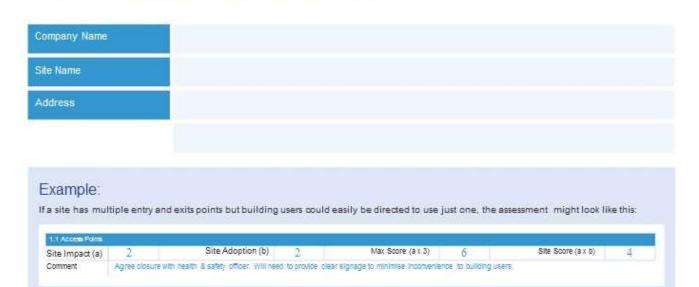

This assessment tool includes potential control measures that may reduce the risk of a COVID-19 workplace contamination event. It should be conducted in conjunction with your existing risk assessment policy. Not all of the controls will be appropriate for all buildings and there may be further site specific measures that need to be considered on an individual basis. The assessment may also require input from other stakeholders within the organisation and supply chain including those responsible for health and safety, human resources, cleaning, security, facilities, etc.

For each control measure you will need to judge two elements. The impact score should reflect your assessment of the potential impact of the control measure at the site being assessed. The adoption score should reflect the current position at your site. The risk assessment should be updated WEEKLY to take into account changes in government guidance.

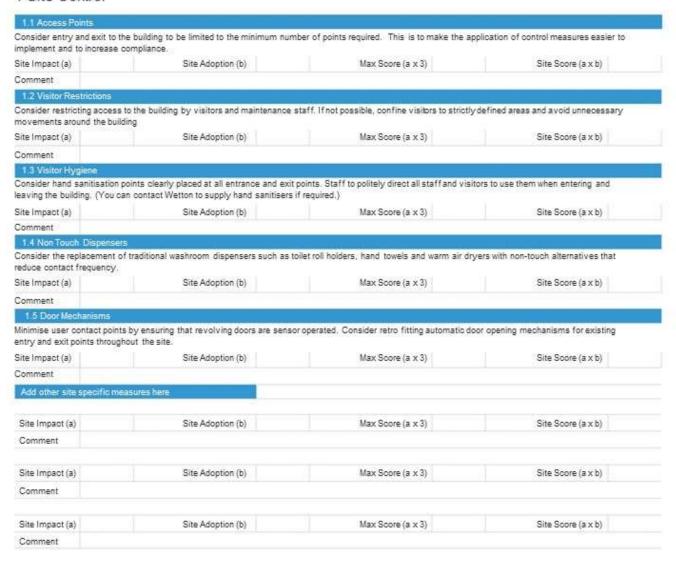

For Site Impact scores you should score 1 where you consider the impact on controlling COVID-19 on the site would be low, 2 where you consider the impact would be moderate and 3 where the impact would be high. For Site Adoption you should score 1 where you consider the CURRENT adoption of the measure is low, 2 where you consider the adoption is moderate and 3 where the adoption is good. Score 0 where the measure would not be possible or is not applicable

CONTROL MEASURES

1 Site Control

Germs spread easily. Always carry tissues and use them to catch your cough or sneeze.

Germs can live for several hours on tissues. Dispose of your tissue as soon as possible.

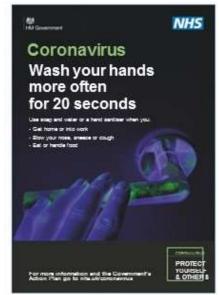

Hands can transfer germs to every surface you touch. Clean your hands as soon as you can.

Remember, the key advice to minimise any workplace infection is to encourage building users to wash their hands regularly and for a minimum of 20 seconds. Change signage regularly to maintain a high level of visual impact. As well as NHS signage, you could create your own and we have added some examples of alternatives above.
